                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antibody which specifically binds to the platelet derived growth beta receptor (PDGFR beta), but not within the fifth extracellular Ig-like domain, where the antibody inhibits PDGF BB-induced proliferation of a cell expressing the PDGF beta receptor. The antibody can be used in a method of inhibiting intimal hyperplasia in the vasculature of a mammal. The antibodies can be used for the treatment of disorders related to PDGF activity such as disorders involving proliferation of smooth muscle cells, and including restenosis following angioplasty
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This is the amino acid sequence for the light chain of muM4TS.11, a novel

Antibodies to platelet derived growth factor beta receptor - inhibit PDGF BB-induced proliferation of cells expressing the receptor, used particularly for inhibiting intimal hyperplassa.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This is the amino acid sequence for the light chain of HuM4TS.11, a novel antibody which specifically binds to the platelet derived growth beta seceptor (PDGF-R beta). but not within the fifth extracellular 19-like domain, where the antibody inhibits PDGF BB-induced proliferation of a cell expressing the PDGF beta receptor. The antibody can be used in a method of inhibiting intimal hyperplasia in the vasculature of a mammal. The antibodies can be used for the treatment of disorders related to PDGF activity such as disorders involving proliferation of smooth muscle cells, and including restenosis following angloplasty
                                                                                                                  HuM4TS.11; antibody; platelet; beta receptor; PDGF-R beta; inhibition; intimal hyperplasia; vasculature; restenosis; angioplasty; light chain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents the light chain variable region of a humanised murine interleukin-4 (IL-4) antibody 3B9. The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma, anaphylactic shock, rheumatoid arthritis, host versues graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New DNA molecules encoding recombinant antibodies useful for treating IL4
                                                                                                                                                                                                                                                      Light chain variable region; interleukin-4; IL-4; antibody 3B9; chimeric antibody; humanised antibody; IL-4 mediated allergic reaction; IImmunoglobulin E-mediated allergic reaction; allergic rhintitis; conjunctivitis; atopic dermatitis; atopic aethma; anaphylactic shock; rheumatoid arthritis; host-versus-graft disease; renal disease; allergy.

The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin B (IgE) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic dematitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                                                                                                                                                                                                                                                   Antibody, interleukin-4, IL4; immunoglobulin E; IgE mediated disease; allergic disorder; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; cell proliferation regulator; therapy; autoimmune disease; graft versus host disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents the light chain of the humanised 3B9 antibody of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

```
The present sequence represents the light chain variable region of murine interleukin 4 (IL-4) antibody 3B9. The sequences are used in the production chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated altergic reactions e.g. allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma, anaphylactic shock, rheumatoid arthritis, host versus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antibody, interleukin-4; IL4; immunoglobulin E; IgE mediated disease; allergic disorder; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; cell proliferation regulator; therapy; autoimmune disease; graft versus host disease.
                                                                                                                                                                                                                                                                                                                                                        New DNA molecules encoding recombinant antibodies useful for treating IL4
chimeric antibody, humanised antibody; IL-4 mediated allergic reaction; Immunoglobulin E-mediated allergic reaction; allergic rihintitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; rheumatoid arthritis; host-versus-graft disease; renal disease; allergy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Spleen cells from mice immunized with human IL-4 were used to prepare hybridomas, which were screened for anti-IL-4 MAb secretion. Only clone 3B9 was positive. cDNA clones of the 3B9 light and heavy chains were cloned into pGBN7f+ and transformed into B. coli DH5-alpha. The clones were sequenced (AAQ83490-91), and used for antibody engineering. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                          This sequence represents the light chain of the murine 3B9 antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin E (IgE) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic aefmantitis, atopic aethma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease

This interior features to the movel treatment. Specifically, it refers

to a peptide autoantigen that is linked to an antibody raised against an

antigen presenting cell (APC) receptor. The present invention describes a

method for treating diabetes mellitus by inducing an immune tolerance to

an autoantigen, which can be chosen from glutamic acid decarboxylase

(GAD), insulin or a heat shock protein (HSP), as well as epitopes derived

from each thereof or beta cell antigens that are linked to an APC

receptor antibody. In particular, the antibody recognises a receptor

chosen from DC-SIGNR, MHC, toll receptor or mannose receptor amongst

chosen from DC-SIGNR, MHC, toll receptor or mannose receptor amongst

chosen from DC-SIGNR, MHC, toll receptor or mannose receptor amongst

chosen from DC-SIGNR, MHC, toll receptor or mannose receptor amongst

chosen from DC-SIGNR, MHC, toll receptor or mannose receptor amongst

chosen from DC-SIGNR, MHC, toll receptor or mannose receptor

autoantigen construct then works to interfere with the interaction

between the APC and immune cells such as autoreactive T cells, and hence

chewen the APC and immune cells such as autoreactive or development of vaccines. Note that the single chain antibodies (scFVB)

cused in this specification contain both variable light and heavy chain

cragions connected by a linker, their short length makes these antibody

fragments particularly suitable for antigen linkage, and the capacity for

chain murine anti-human DC-SIGNR (hDC-SIGNR) CDR3 peptide of the
antibody/autoantigen construct containing an autoantigen linked to an antibody to a receptor of an antigen presenting cell and administering the construct to a subject.
                                                                                                                                                                                                                                                                                                                                       This invention relates to the novel treatment of an autoimmune disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            autoimmune disease; antibody; antigen presenting cell; APC; diabetes mellitus; immune tolerance; antidiabetic; immunosuppressive; vaccine; hDC-SIGNR; IgG1k.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Dakappagari
                                                                                                                                                                                                                                Example 10; SEQ ID NO 123; 71pp; English.
```

high affinity mAbs - useful in treatment of IL-4-mediated and IgE-

mediated allergic conditions.

```
that utilises an antibody/ autoantigen construct. Specifically, it refers
to a peptide autoantigen that is linked to an antibody raised against an
antigen presenting cell (APC) receptor. The present invention describes a
method for treating diabetes mellitus by inducing an immune tolerance to
an autoantigen, which can be chosen from glutamic acid decarboxylase
(GAD), insulin or a heat shock protein (HSP), as well as epitopes derived
from each thereof or beta cell antigens that are linked to an APC
receptor antibody. In particular, the antibody recognises a receptor
chosen from D-SIGNR, MHC, toll receptor or manose receptor amongst
cothers, which is expressed on the surface of the APC. The antibody/
autoantigen construct then works to interfere with the interaction
cothers, which is expressed on the surface of the APC. The antibody/
autoantigen construct then works to interfere with the interaction
cothers, which is expressed on the surface of the APC. The antibody/
autoantigen construct then works to interfere with the interaction
cothers, which is expressed on the surface of the APC. The autibody
contain both variable light and heavy chain
regions connected by a linker, their short length makes these antibody
credions in this specification contain both variable light and heavy chain
credions the APC in the single for antigen linkage, and the capacity for
highly the contain the contain both wariable light and the capacity for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           binding to the receptor is preserved. This polypeptide sequence is a light chain murine anti-human DC-SIGNR (hDC-SIGNR) IgG1k antibody protein
antibody/autoantigen construct containing an autoantigen linked to an antibody to a receptor of an antigen presenting cell and administering the construct to a subject.
                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to the novel treatment of an autoimmune disease
                                                                                                                                                                                                                                                                               Example 10; Fig 11; 71pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 113 AA;

                                                                             A humanized antibody light chain variable region and signal sequence is given in AAR75355. The signal sequence is also provided in AAR70194. The sequences of the first 2 CDRs are identical to mouse anti-human IL-4 MAD. 3B9 light chain CDRs (given in AAR70195-96), but the third (AAR70201) differs by a single amino acid from the native mouse CDR (AAR70197). (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DNA molecules encoding recombinant antibodies useful for treating IL4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Light chain variable region; interleukin-4; IL-4; antibody 3B9; chimeric antibody; humanised antibody; IL-4 mediated allergic reaction; Immunoglobulin E-mediated allergic reaction; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; rheumatoid arthritis; host-versus-graft disease; renal disease; allergy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (CDR) of the light chain variable region of murine interleukin-4 (IL-4) antibody 389. The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma, anaphylactic shock, rheumatoid arthritis, host-versus-graft disease and remal disease. differentiation (CD) positive cells using a recombinant (chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful for the geparation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived complementarity determining region CDR-3 protein fragment which is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                Cluster differentiation; cell separation; antibody; CD4; CD34; leukemia; hematopoietic; undifferentiated; lymphocyte; bone marrow transplantation HIV infection; autoimmune disease; complementarity determining region;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Devices containing antibodies recognising CD4 or CD34 and their use for the separation of CD4 or CD34 positive cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes a novel device (I) for separating cluster
                                                                                                                                                                                                                                Murine CD4/CD34 recognizing antibody light chain CDR-3 region #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 9;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antibody 4H5 L chain variable region CDR3 fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score 45; DB 3;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents a light chain complementarity determining region (CDR) from an antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin E (IgB) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic dematitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antibody; interleukin-4; IL4; immunoglobulin E; IgE mediated disease; allergic disorder; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; cell proliferation regulator; therapy; autoimmune disease; graft versus host disease; complementarity determining region; CDR.
 are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of

The invention relates to transforming a population of cells (e.g. plant cells), comprising using a library of two different polynucleotides encoding different immunoglobulin binding protein (TgBP) polypeptides that specifically bind to a ligand or form one or more disulphide bonds with polypeptides in transfected cells, to generate an IgBP that binds to a ligand, and transformed plant cells are selected, and preparing an IgBP carray in plant cells. At least one peptide sequence has at least 75% sequence identity to a framework region (FR) of a native IgM, IgG, IgA, IgB, IgY, kappa or lambda immunoglobulin molecule. The method is useful for preparing an immunoglobulin binding protein array, preferably heavy chain binding protein (GHBP) array in eukaryotic cells especially plant cells (e.g. Agrobacterium tumefaciens or maize) or other eukaryotic cells (e.g. insect cells or mammalian cells). The CHBP is useful for discovery of e.g. screening assays of IgBPs having desired characteristics. The present sequence is a mammanian immunoglobulin derived peptide that may be incorporated into an IgBP of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cluster differentiation; cell separation; antibody; CD4; CD34; leukemia; hematopoietic; undifferentiated; lymphocyte; bone marrow transplantation; HIV infection; autoimmune disease; murine.

                                                                                                                                                                                                                                                                                                                                                                                                              The invention provides an antibody having affinity to CD4 antigen. The anti-human CD4 antibody 4H5 is used for the detection of antigen and application for drugs. It is highly safe in human dose. Sequences AAX59259-61 represent the complementarity determining region (CDR)-1, CDR -2 and CDR-3 fragments in the L chain variable region of the antibody 4H5 respectively
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Preparing immunoglobulin binding protein array in plant cells by transforming the cells with different polynucleotides encoding binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Immunoglobulin; antibody; light chain; heavy chain; CDR; FR; complementarity determining region; framework region; IgBP; transgenic plant; immunoglobulin binding protein array; IgM; IgG; IgA; IgP; IgY; IgM; kappa; lambda; CHBP.

                                                                                                                    ö
single-chain) antibody recognising CD4 or CD34. The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention provides an antibody having affinity to CD4 antigen. The anti-human CD4 antibody 4H5 is used for the detection of antigen and application for drugs. It is highly safe in human dose. The present sequence represents the L chain variable region of the antibody 4H5

The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a muxine derived protein fragment which is used to illustrate the method of the invention
                                                     Cluster differentiation; cell separation; antibody; CD4; CD34; leukemia; hematopoietic; undifferentiated; lymphocyte; bone marrow transplantation; HIV infection; autoimmune disease; murine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cluster differentiation; cell separation; antibody; CD4; CD34; leukemia; hematopoietic; undifferentiated; lymphocyte; bone marrow transplantation; HIV infection; autoimmune disease; murine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CD4 or CD34 and their use for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

The present invention relates to modified (e.g. deimmunised) antibodies are less immunogenic compared to the modified anti-PSWA antibodies are less immunogenic compared to the unmodified anti-PSWA antibodies. The modified antibodies comprise comprise complementarity determining regions (CDRs) from a non-human antibody (e.g. murine antibody J591,J415,J53 or E99), and framework sequences that are less immunogenic in humans (e.g. less antigenic than the murine frameworks in which a murine CDR human PMSA, with high affinity and specificity. The anti-PMSA antibodies are useful for treating or preventing a prostatic or cancerous disorder, e.g. genitourinary inflammation, prostatitis, benign enlargement, sportatic cancer or testicular cancer, or solid tumours, soft tissue tumours or metastatic lesions, and its associated pain. The present sequence represents a variable region from a murine antibody
                                                                                                                                                                                                                                                                                                                                                                                                                prostate specific membrane antigen; immunogenic; CDR; murine; complementarity determining respion; JOS1, 7415; JOS1; B99; mouse; prostatic disorder; cancerous disorder; genitourinary inflammation; prostatitis; benign enlargement; prostatic cancer; testicular cancer; solid tumour; soft tissue tumour; metastatic lesion; pain; analgesic; antiinflammatory; cytostatic; framework region; variable heavy chain; variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             immunoglobulins, useful for treating or preventing a prostatic or cancerous disorder, e.g. genitourinary inflammation, prostatits, prostatic or testicular cancer.
                                                                                                                                                                                                                                                                                                                                                                                                  antibody; deimmunised antibody; anti-PMSA antibody;
 application for drugs. It is highly safe in human dose. The sequence represents a L chain fragment of the antibody 4H5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New modified anti-prostate specific membrane antigen (PSMA)

                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                          This invention describes a novel device (I) for separating cluster differentiation (CD)-positive cells using a recombinant (chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate the method of the invention
                                                                                                                                                                                                              Devices containing antibodies recognising CD4 or CD34 and their use for the separation of CD4 or CD34 positive cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention provides an antibody having affinity to CD4 antigen. The anti-human CD4 antibody 4H5 is used for the detection of antigen and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;

continuity of the control of the control of the central control of antibodies have antipodicit, antibodies have antipodicit, antibodies have antipodicit, antibodies, and antiallergic activities, and can be used in vaccines. Mis useful for treating a skin disorder in a subject, by administering to the subject, an amount of an antibody which binds specifically to the extracellular domain of PSMA (the subject is a mammal, preferably human and is having, or at risk of, a skin disorder). The skin disorder is a dermal or an epidermal disorder, and is selected from psoriasis (preferably chronic stationary psoriasis, psoriasis ungaris, eruptive (gluttate) psoriasis, psoriatic erythroderma, configuratis, and localised pustular psoriasis (Von Zumbusch), annular pustular psoriasis, pityriasis lichenoidere, lichen planus, lichen nitidus, pareferably psoriasis, keratodermas, dermatosis, and prokeratosis, preferably psoriasis. Mis useful for treating a skin disorder such as an inflammatory or neoplastic disorder of the epidermis or dermis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method (M1) for ablating or killing an aberrant prostate specific membrane antigen (PSWA)-expressing cell (e.g. an epidermal and a dermal cell). MI comprises contacting the cell, or a vascular endothelial cell proximate to the cell, with an antibody (or its antigen-binding fragment), which binds specifically to the extracellular domain of PSWA in an amount sufficient to ablate or kill the cell. The

The invention relates to the use of an anti-prostate specific membrane antigen (anti-PSMA) antibody or antigen-binding fragment for treating prostate cancer, monitoring a patient receiving an anti-PSMA antibody to treat prostate cancer, or selecting a patient for treatment with an anti-PSMA antibody. Also included are a method of treating prostate cancer in subject, a method of monitoring a patient receiving an anti-PSMA cartibody to treat prostate cancer and a method of selecting an anti-PSMA cartibody to treat prostate cancer and a method of selecting a patient for treatment with an anti-PSMA antibody. Also disclosed are anti-PSMA antibody or antigen-binding fragment is a human antibody or cantigen-binding fragment is selected from CDR-grafted antibody or antigen-binding fragments. The modified antibody or antigen-binding fragment has one or more CDRs (complementarity determining region) from a mouse monoclonal antibody or selected from J591, J415, J533, or E99. The anti-PSMA antibody or antigen binding fragment is useful for treating prostate cancer, monitoring a patient for treatment with an anti-PSMA antibody. The present sequence is a mouse kabat subgroup consensus sequence for a light or

The method is useful for treating an insulin-related disorder, including obesity, hyperglycaemia, hypoglycaemia, hypoglycaemia, hypoglycaemia, insulin-resistence, impaired glucose colerance, impaired fasting glucose. Type I diabetes mellitus, Type 2 diabetes mellitus, and gestational diabetes. The present sequence represents Kabat

                                           This sequence is the light chain variable region of a preferred anti-CD4 monoclonal antibody for use in the claimed synergistic composition. MAD MT 3.10 is deposited as clone 3.101/sB10 (ECACC 90090702). The anti-CD4 antibody is used with at least one anti-ILZA alpha or beta antibody. Individually the antibodies are strongly inhibiting and when used together their immunosuppressive properties are improved; they synergistically inhibit T-helper cell proliferation to effectively inhibit transplant rejection at low doses without significantly reducing the general immune response. See also AAQ36608-Q36616. (Updated on 10-MAR-2003 to add missing OS field.) (Updated on 25-MAR-2003 to correct PN

The present sequence represents the light chain variable region of a humanised murine interleukin-4 (IL-4) antibody 3B9. The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma, anaphylactic shock, rheumatoid arthritis, vestus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New DNA molecules encoding recombinant antibodies useful for treating IL4 -mediated conditions.
                                                                                    Light chain variable region; interleukin-4; IL-4; antibody 3B9; chimeric antibody; humanised antibody; IL-4 mediated allergic reaction; Immunoglobulin E-mediated allergic reaction; allergic rhintitis; conjunctivitis; atopic dermatitis; atopic asthm; anaphylactic shock; rheumatoid arthritis; host-versus-graft disease; renal disease; allergy.
                                                  Light chain variable region of humanised murine IL-4 antibody 3B9.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Light chain sequence for humanised 3B9 antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score 45; DB 2; Pred. The signal sequence is also provided in AAR70194. The sequences of the first 2 CDRs are identical to mouse anti-human IL-4 MAb 3B9 light chain CDRs (given in AAR70195-96), but the third (AAR70201) differs by a single amino acid from the native mouse CDR (AAR70197). (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Chimeric and humanised \rm IL-4 monoclonal antibodies (mAbs), derived from high affinity mAbs - useful in treatment of \rm IL-4-mediated and \rm IgE-mediated allergic conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

This invention describes a novel device (I) for separating cluster differentiation (CD)-positive cells using a recombinant (chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful for the separation of CT4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cluster differentiation; cell separation; antibody; CD4; CD34; leukemia; hematopoietic; undifferentiated; lymphocyte; bone marrow transplantation; HIV infection; autoimmune disease; murine.
                                                                                                                                         Devices containing antibodies recognising CD4 or CD34 and their use for the separation of CD4 or CD34 positive cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Devices containing antibodies recognising CD4 or CD34 and their use for the separation of CD4 or CD34 positive cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents the light chain of the humanised 3B9 antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin B (IgB) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cluster differentiation, cell separation, antibody, CD4, CD34, leukemia; hematopoietic, undifferentiated, lymphocyte; bone marrow transplantation, HIV infection, autoimmune disease; murine.

The invention provides an antibody having affinity to CD4 antigen. The anti-human CD4 antibody 4H5 is used for the detection of antigen and application for drugs. It is highly safe in human dose. The present sequence represents the L chain sequence of the antibody 4H5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Material for collecting cells positive for CD-4 antibody - comprises nonwoven fabric having keto-alkyl halide functional gp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 45; DB 3; Length 305;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                              ö
             differentiation (CD)-positive cells using a recombinant (chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention provides an antibody having affinity to CD4 antigen. The anti-human CD4 antibody 4H5 is used for the detection of antigen and application for druga. It is highly selfe in human dose. The present sequence represents the H chain sequence of the antibody 4H5
                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
This invention describes a novel device (I) for separating cluster

(Updated on 25-MAR-2003 to correct PF
                      AAR66140-R66146 are peptides complementary to the variable region of th CD-4 antibody, these peptides are fixed onto a claimed nonwoven fabric (average fibre dia. of 1-30 microns) coated with keto-alkyl halide functional groups. This material can be used as a filter for CD-4 positive cells in a medical treatment involving the extra-corporeal circulation of blood

This is the amino acid of complementarity determining region 3 (CDR-L3) of the light chain (see AAW83042) of murine anti-human Fas monoclonal antibody HFS7A. The invention relates to antibodies, especially humanised antibodies see AAW83031-37), recognising the Fas antigen. Such antibodies preferably comprise a heavy chain and a light chain including comprise a heavy chain and a light chain including comprise a heavy chain and light chains of HFS7A. The induction apoptosis in anormal cells expressing Fas, and of inhibiting Fas-induced apoptosis in normal cells. They are used to chain interactions, and also to treat such diseases that involve Fas/Fas ligand interactions, and also to treat such diseases, including autoimmune disease (e.g. systemic lugus erythematosus, Hashimoto's disease, graft versus host disease Sjogren syndrome, pernicious anaemia, addison's disease, aclorederma, Goodpasture syndrome, Crohn's disease, cheumatoid arthritis, autoimmune hemolytic anaemia, sterility, mysthenia gravis, multiple sclerosis, Basedow's disease, thrombopenia arteriosclerosis, myocarditis, allogand transplant rejection (all claimed). (Updated on 25-MAR-2003 to correct DR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

                                                                                                                                                                                                                                                                                                                                                                    The invention relates to compositions for the prevention or treatment or diseases caused by an abnormality in the Fas/Fas ligand system containing an anti-Fas antibody as the active component. The anti-Fas antibody is either the murine anti-human Fas monoclonal antibody HFBTA, or all the factor of HFBTA, which is interaction with Fas, the humanised version of HFBTA containing identical CDRs (complementarity determining regions) to antibody HFBTA. Wis its interaction with Fas, the antibody of the invention acts as a modulator of apoptosis. The compositions of the invention may therefore be used in the treatment or prevention of conditions such as autoimmune diseases, allergy, arteriosclerosis, myocoarditis, cardiomyopathy, glomerulonephritis, aplastic anaemia (panmyelophthisis), hepatitis, AIDS and organ graft caption. Murine anti-Fas antibody peptide fragment #6.

Fas, antibody, murine, anti-inflammatory; anti-anemic; antidiabetic; anti-allergic; anti-arthritic; antiviral; immunomodulatory; cardiant; dermatological; immunosuppressive; thyronimetic; antirheumatic; anti-Fas; nephrotropic, antiinfertility; neuroprotective; antiarteriosclerotic; hepatotropic; humanized; apoptosis; systemic lupus erythematosus; Hashimoto disease; rheumatoid arthritis; graft versus host disease; Sjorgen's syndrome; anemia; Addison's disease; scleroderma; sterility; Goodpasture syndrome; Crohn's disease; sterility; myasthenia gravis; unultiple scleroasis, Basedow's disease; thrombopenia purpura; allergy; insulin dependent diabetes mellitus; arteriosclerosis; myocarditis; cardiomyopathy; glomerulonephritis; hepatitis; transplant rejection.

EP990663-A2

05-APR-2000

This invention describes a novel humanized anti-Fas antibody-like

molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas

ligand system, by binding to Fas on the cell surface, and prevents

capoptosis in cells with a normal system, by inhibiting binding between

Fas and its ligand. The products of the invention have anti-inflammatory,
anti-amenic, antidiabetic, anti-allergic, anti-arthritic, antiviral,
immunomodulatory, dermatological, immunosupressive, thyromimetic,
antiarteriosclerotic, cardiant and hepatropic activity. (I) induce
antiarteriosclerotic, cardiant and hepatropic activity. (I) induce
capoptosis by binding to cell surface Fas or inhibit it by competitive
inhibition of ligand binding. (I) are used to treat and/or prevent
cinhibition of ligand binding. (I) are used to treat and/or prevent
cinhibition of ligand binding. (I) are used to treat syndromery pervent
competition of ligand binding. (I) are used to treat and/or prevent
competition of ligand binding. (I) are used to treat and/or prevent
competition of ligand binding. (I) are used to treat and/or prevent
competition of ligand binding. (I) are used to treat and/or prevent
competition of ligand binding. (I) are used to treat
diseases associated with the Fas/Fas ligand system, especially systemic
commine, Addison's disease, scleroderma, Goodpasture syndrome, Crohn's
disease, autoimmune hemolytic anemia, sterilosolerosis, myocarditis,
calesase, autoimmune hemolytic anemia, sterilosolerosis, myocarditis,
calesase, autoimmune hemolytic anemia, sterilosolerosis, myocarditis,
cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral
competes in normal cells but selectively induce it in abnormal
cells. They bind to both human and murine Fas, so can be evaluated in
culting a human anti-murine antibody response. This sequence represents
conducing a human anti-murine antibody response. This sequence represents
conducing a nurine anti-bas antibody response. This sequence represents
conductive facence of the active site of Fas New humanized anti-Fas antibody, useful for treating or preventing e.g. inflammatory or autoimmune disease, induces apoptosis selectively in cells with abnormal Fas-Fas ligand systems.
